Methods II
HW7 Write Up

1. I was unsure about how to load the n-gram language model for step 1 (e.g. if I needed to copy my hw6 files into my hw7 repository), since the 'en.lm' file was in my hw6 repository. But I took the easy route and just copied the file into my hw7 repo, which worked out fine.

2. It took me a bit of time to realize that 'data/test.ana' and 'data/test.hyp' meant that 'data' was a folder that included the files 'test.ana' and 'test.hyp'. I would have known if I had inspected the 'data' folder before beginning the assignment, but I admit that I didn't because I assumed it was one of those files that was automatically generated (like '.DS_Store' and '.idea/' which I just ignore). As a result, I went through the trouble of saving the raw version of 'test.ana' from Github, naming it 'ana.txt' and then naming the output file 'hyp.txt' so that I could see their contents. Running 'git status' helped me figure it out after seeing 'data/test.ana' in the list of files, as well as seeing that I could look into the contents of 'test.ana' when I open it through PyCharm rather than Finder.
